Project Name	Food Consumer Behaviour Analytics Portal
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" they want - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problems or barriers exist - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I’m trying to	But	Because	Which makes me feel
PS-1	A Restaurant Operations Manager / Food Delivery Executive	Analyze order distributions, top meal preferences, and peak demand patterns across regions and cities to optimize operational strategy.	Raw transactional food ordering data is large, unstructured, and difficult to interpret quickly.	Traditional tabular reports lack visual hierarchy, interactive filtering, and unified demographic categorization.	Frustrated and delayed in making data-driven decisions for stock allocation and regional marketing.
PS-2	A Data & Business Analyst responsible for reporting enterprise performance metrics	Build and deploy an interactive dashboard that provides demographic, regional, meal-type, order-frequency, and spending insights.	High-volume transaction data creates visual clutter, while separate analytics tools make stakeholder access difficult.	Pre-processing, demographic segmentation, dashboard integration, and web embedding are not unified in one solution.	Concerned about inefficient analysis, presentation bottlenecks, and difficulty communicating insights to stakeholders.
