Data Quality Report Template

The Data Quality Report Template will summarize data quality issues from the selected source, including severity levels and resolution plans. It will aid in systematically identifying and rectifying data discrepancies.

Data Source	Data Quality Issue	Severity	Resolution Plan
Food transaction dataset (50,000 records)	Missing-value check and handling of incomplete fields before visualization.	Moderate	Profile fields for null/blank values; remove or appropriately handle incomplete records/values before loading the final visualization, and re-check the resulting data source.
Food transaction dataset (50,000 records)	Duplicate-record check to prevent the same transaction from being counted more than once.	Moderate	Identify duplicate transaction rows/IDs and remove duplicate records where confirmed; verify the final row count before visualization.

Data Source	Data Quality Issue	Severity	Resolution Plan
Food transaction dataset (50,000 records)	Data-type and schema consistency across fields used in Tableau calculations and charts.	Moderate	Set categorical fields as dimensions and numeric fields as measures; verify date fields as dates and confirm the Tableau data source has no schema errors.
Food transaction dataset (50,000 records)	Age values need consistent grouping for demographic analysis.	Low	Create the Age Group calculated field with IF/ELSEIF logic and use the resulting categories consistently in the dashboard.
