Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting

## Business Questions and Visualisation

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

## Project – Specific Business Questions And Visualizations

### 1. What are the macro operational metrics across all 50,000 orders?

- **Visualization:** KPI Block displaying Total Delivery Fees, Total Revenue, Average Rating, and Total Orders.
- **Observation:** The portal captured **50,000 total orders** generating **₹27.39M in Total Revenue** and **₹2.98M in Delivery Fees**, with an overall **Average Rating of 3**.

## 2. Which major cities generate the highest total order volume?

- **Visualization:** Cities By Order Volume horizontal lollipop/bar chart.
- **Observation:** Mumbai leads with **8,443 orders**, closely followed by Pune (8,354) and Bangalore (8,353), showing an even distribution of demand across tier-1 cities.

### 3. How does total revenue distribute across main meal types throughout the day?

- **Visualization: Revenue By Meal Type** treemap.
- **Observation: Breakfast** generates the highest revenue segment at **₹6.92M**, while Lunch (₹6.86M), Snacks (₹6.86M), and Dinner (₹6.75M) follow closely.

### 4. How do order volumes vary across age groups and restaurant budget tiers?

- **Visualization: Age Group & Restaurant Segment** horizontal grouped bar chart.
- **Observation: The 25–35 age group** drives the highest order volume across all restaurant types, with **Premium restaurants** receiving the highest count (**6,983 orders**).

## 5. How does dining company/group size influence order preferences by meal type?

- **Visualization: Company & Meal Type** grouped horizontal bar chart.
- **Observation:** Ordering volume remains consistent (~3,000 to 3,228 orders per slot) regardless of dining group type (Alone, Family, Friends, Partner) or meal timing.

## 6. What are the dominant customer cuisine preferences across orders?

- **Visualization: Cuisine Preferences** treemap percentage breakdown.
- **Observation: Desserts lead overall demand at 16.9% (8,452 orders)**, followed by Fast Food (16.7%), Chinese (16.7%), Biryani (16.6%), and South Indian (16.6%).

## 7. How are order volumes and cuisine distributions geographically spread across India?

- **Visualization: City & Cuisine Density** Mapplot chart using pie chart location overlays.
- **Observation:** Order density is heavily concentrated in central, western, and southern metropolitan hubs with balanced multi-cuisine distribution across regions.

## 8. How are customer rating scores distributed across different meal types?

- **Visualization: Rating By Meal Type** packed bubble chart.
- **Observation: Dinner, Lunch, and Snacks** represent the largest clusters, demonstrating that core afternoon and evening meal windows receive the highest volume of user feedback ratings.
