By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for data storytelling, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, Story is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

## Observations:

- Executive Platform Performance:** The portal captures **50,000 total transaction records** generating **₹27.39M in Total Revenue** and **₹2.98M in Delivery Fees**, maintaining a uniform platform-wide **Average Rating of 3**.
- Urban Geographic Distribution:** **Mumbai generates the highest order volume at 8,443 orders**, closely followed by Pune (8,354), Bangalore (8,353), Delhi (8,309), Chandigarh (8,279), and Hyderabad (8,262), indicating balanced multi-metropolitan platform adoption.
- Daypart Revenue Segments:** **Breakfast leads gross revenue at ₹6.92M**, while Lunch (₹6.86M), Snacks (₹6.86M), and Dinner (₹6.75M) follow closely, confirming steady round-the-clock ordering demand.
- Demographic Target Group:** The **25–35 age group accounts for the highest transaction volume**, showing peak ordering activity in **Premium category restaurants (6,983 orders)**.

- **Top Cuisine Demand: Desserts constitute the highest overall consumer preference at 16.9% (8,452 orders)**, followed by Fast Food (16.7%), Chinese (16.7%), Biryani (16.6%), South Indian (16.6%), and North Indian (16.5%).
- **Customer Feedback Distribution:** Packed bubble analytics show that **Dinner, Lunch, and Snacks** generate the largest review feedback clusters, identifying key operational windows for customer satisfaction monitoring.
- **Customer Retention Split:** Order distribution is evenly split between **Repeat Customers ("Yes")** and **New Customers ("No")** (~25,000 orders each), confirming balanced user acquisition and platform loyalty.
